

## How to use these codes

Type or paste any code before or within your prompt. Example: "REDTEAM — Here's my business plan: [your plan]" or "/human — Rewrite this email: [your email]"

### Core Writing & Style

| Code                   | What It Does                                                |
|------------------------|-------------------------------------------------------------|
| <code>/human</code>    | Rewrites text so it sounds more natural and less robotic.   |
| <code>/rewrite</code>  | Rephrases the text while keeping the core meaning the same. |
| <code>/improve</code>  | Upgrades clarity, flow, and overall quality.                |
| <code>/shorten</code>  | Condenses the text into a tighter version.                  |
| <code>/expand</code>   | Adds detail, depth, and supporting context.                 |
| <code>/simplify</code> | Makes the text easier to understand with plainer language.  |
| <code>/formal</code>   | Changes the tone to sound more professional.                |
| <code>/casual</code>   | Changes the tone to sound more relaxed and conversational.  |

### Explanation Levels

| Code                    | What It Does                                                    |
|-------------------------|-----------------------------------------------------------------|
| <code>ELI5</code>       | Explains something in very simple terms as if teaching a child. |
| <code>ELI10</code>      | Explains something simply but with slightly more depth.         |
| <code>ELI15</code>      | Explains a topic at a basic teen level with moderate detail.    |
| <code>ELICollege</code> | Explains a topic with more rigor and academic depth.            |
| <code>ELIPhD</code>     | Explains a topic at a highly advanced and technical level.      |
| <code>/analogies</code> | Explains a concept using comparisons to familiar things.        |
| <code>/deep</code>      | Pushes for a more detailed and layered explanation.             |

|                               |                                                      |
|-------------------------------|------------------------------------------------------|
| <code>/why</code>             | Focuses on the reason or mechanism behind something. |
| <code>/firstprinciples</code> | Breaks an idea down into its most basic truths.      |

## Formatting & Output

| Code                    | What It Does                                             |
|-------------------------|----------------------------------------------------------|
| <b>TLDR</b>             | Summarizes the content into the shortest useful version. |
| <b>BULLETS</b>          | Turns the output into bullet points.                     |
| <b>TABLE</b>            | Formats the output as a table for easier comparison.     |
| <b>CHECKLIST</b>        | Converts the answer into an actionable checklist.        |
| <b>STEPS</b>            | Turns the response into a step-by-step process.          |
| <code>/outline</code>   | Organizes the content into a structured outline.         |
| <code>/summary</code>   | Provides a concise summary of the main points.           |
| <code>/keypoints</code> | Pulls out only the most important takeaways.             |

## Learning & Study

| Code                   | What It Does                                                       |
|------------------------|--------------------------------------------------------------------|
| <b>QUIZME</b>          | Creates quiz questions based on the material.                      |
| <b>FLASHCARDS</b>      | Turns the material into flashcard-style prompts and answers.       |
| <b>TESTME</b>          | Tests your understanding with questions instead of direct answers. |
| <b>SOCRATIC</b>        | Teaches by asking guided questions to help you think.              |
| <code>/socratic</code> | Switches the response into a question-led teaching style.          |
| <b>FEYNMAN</b>         | Explains a concept as simply as possible for true understanding.   |

|                       |                                                             |
|-----------------------|-------------------------------------------------------------|
| <b>MISCONCEPTIONS</b> | Lists common misunderstandings about a topic.               |
| <b>TIMELINE</b>       | Organizes a topic or history into chronological order.      |
| <b>/teachme</b>       | Frames the response as a lesson instead of a normal answer. |

## 💡 Brainstorming & Ideas

| Code                  | What It Does                                           |
|-----------------------|--------------------------------------------------------|
| <b>IDEAS10</b>        | Generates ten ideas quickly around a topic.            |
| <b>ALT3</b>           | Provides three different alternatives or versions.     |
| <b>HOOKS10</b>        | Generates ten hook ideas for content or writing.       |
| <b>HOOK10</b>         | Creates ten short hook options for quick testing.      |
| <b>IDEAGEN</b>        | Produces a wider spread of idea directions.            |
| <b>SCAMPER</b>        | Improves ideas using the SCAMPER creativity framework. |
| <b>REMIX</b>          | Combines two concepts into a new hybrid idea.          |
| <b>/brainstorm100</b> | Pushes for a large batch of ideas instead of a few.    |
| <b>/viralhooks</b>    | Generates hooks designed to grab attention fast.       |

## 🔍 Analysis & Decision Making

| Code                | What It Does                                                |
|---------------------|-------------------------------------------------------------|
| <b>PROSCONS</b>     | Lists the main advantages and disadvantages.                |
| <b>SWOT</b>         | Analyzes strengths, weaknesses, opportunities, and threats. |
| <b>COMPARE</b>      | Compares two or more options side by side.                  |
| <b>/assumptions</b> | Identifies the hidden assumptions in a claim or idea.       |

|                        |                                                                |
|------------------------|----------------------------------------------------------------|
| <b>/counter</b>        | Generates the strongest counterargument to a position.         |
| <b>/debate</b>         | Explores both sides of an issue in a balanced way.             |
| <b>/steelman</b>       | Builds the strongest possible version of an opposing argument. |
| <b>/devilsadvocate</b> | Challenges your idea by arguing against it.                    |
| <b>RISKMAP</b>         | Identifies the key risks in a plan or decision.                |
| <b>SECONDDORDER</b>    | Looks beyond the first effect to later consequences.           |
| <b>REDTEAM</b>         | Critiques an idea aggressively to expose weaknesses.           |
| <b>DECIDE</b>          | Creates a structured decision framework to choose an option.   |
| <b>PARETO</b>          | Finds the small set of actions likely to drive most results.   |

## Advanced Thinking Systems

| Code                     | What It Does                                                                         |
|--------------------------|--------------------------------------------------------------------------------------|
| <b>DELTR</b>             | Breaks a problem down, evaluates it, applies limits, transforms it, and rebuilds it. |
| <b>OODA</b>              | Analyzes a situation through observe, orient, decide, and act.                       |
| <b>KILLCRITIC</b>        | Forces a blunt critique focused on flaws and weak points.                            |
| <b>PARADOX</b>           | Looks for contradictions or tensions inside an idea.                                 |
| <b>LENSSTACK</b>         | Examines a topic through multiple perspectives or lenses.                            |
| <b>X10THINK</b>          | Pushes the model to think much more deeply before answering.                         |
| <b>HIDDENASSUMPTIONS</b> | Surfaces assumptions that are easy to miss.                                          |
| <b>FRACTAL</b>           | Explores a topic by zooming in and out across levels.                                |

|                        |                                                                 |
|------------------------|-----------------------------------------------------------------|
| <b>BLACKSWAN</b>       | Focuses on rare but high-impact possibilities.                  |
| <b>REVERSEENGINEER</b> | Works backward to infer how something functions.                |
| <b>SIGNALVSNOISE</b>   | Separates the useful information from distractions.             |
| <b>HYPOTHESISGEN</b>   | Generates multiple explanations or theories for an observation. |
| <b>SYSTEMMAP</b>       | Maps the actors, forces, and relationships inside a system.     |
| <b>META</b>            | Examines the framing of the question itself.                    |

## Creative & Content

| Code                        | What It Does                                                   |
|-----------------------------|----------------------------------------------------------------|
| <code>/simulate</code>      | Simulates a scenario, conversation, or role-played situation.  |
| <code>/predict</code>       | Projects likely future outcomes based on current information.  |
| <code>/futurehistory</code> | Describes the future as if it were already being remembered.   |
| <code>/reverse</code>       | Works backward by describing failure first, then inverting it. |
| <b>SCRIPT</b>               | Formats the output like a script for video or dialogue.        |
| <b>THREAD</b>               | Structures the response like a social media thread.            |
| <code>/storymode</code>     | Shifts the answer into a more narrative-driven style.          |

## Coding

| Code               | What It Does                                         |
|--------------------|------------------------------------------------------|
| <b>DEBUG</b>       | Finds likely bugs or errors in code.                 |
| <b>EXPLAINCODE</b> | Explains what the code is doing in plain language.   |
| <b>OPTIMIZE</b>    | Improves code for speed, efficiency, or cleanliness. |

## ⚡ Utility & Power Commands

| Code                        | What It Does                                                  |
|-----------------------------|---------------------------------------------------------------|
| <code>/convert</code>       | Converts content from one format into another.                |
| <code>/translate</code>     | Translates text into another language.                        |
| <code>/tonechange</code>    | Changes the emotional or stylistic tone of the writing.       |
| <code>/examples</code>      | Adds examples to make the idea easier to grasp.               |
| <code>/usecases</code>      | Lists practical situations where the idea can be applied.     |
| <code>/breakdown</code>     | Splits a complex topic into smaller parts.                    |
| <code>/stepbystep</code>    | Forces a sequential process instead of a broad answer.        |
| <code>/insights</code>      | Pulls out notable observations or patterns.                   |
| <code>/clarify</code>       | Clears up ambiguity and makes the meaning more precise.       |
| <code>/expandideas</code>   | Takes a rough idea and develops it further.                   |
| <code>/compress</code>      | Shrinks content while preserving the main message.            |
| <code>/reframe</code>       | Presents the same idea from a different angle.                |
| <code>/coach</code>         | Frames the answer as guidance from a coach or mentor.         |
| <code>/critique</code>      | Reviews the work and points out what needs improvement.       |
| <code>/improvehooks</code>  | Refines hooks to make them more compelling.                   |
| <code>/systemrewrite</code> | Rewrites text to feel more structured and systemized.         |
| <code>/autoprompt</code>    | Generates a better prompt from a rough request.               |
| <code>/godmode</code>       | Pushes for a more assertive and comprehensive response style. |
